Introduction to Dental Microscopy and Advanced Endodontics: 
A Two-Day Hands-On Workshop

Dr. Jeffrey M. Coil

COURSE DESCRIPTION

A stimulating two-day course combining the most current technological methods for endodontics and the fundamentals of clinical microscopy for dentistry. Participants will focus on clinically relevant information that is needed to provide successful advanced procedures for restorative and endodontic procedures, and use that information as they perform their dentistry with the aid of the dental operating microscope (DOM). Participants will learn the requirements for incorporating the DOM into their daily dental practice and perform psychomotor skills including tooth preparations, endodontic access, instrumentation obturation, retreatment on extracted teeth. Novel Nickel Titanium rotary files, irrigation devices, and ultrasonic uses in endodontics will be presented. Upon completion of this course participants will be able to:

1. Par focal a Dental Operating Microscope quickly and correctly.
2. Move freely between most or all magnification levels and know which levels of magnification are best for each situation.
3. Effectively and efficiently move throughout the maxillary arch using direct and reflected vision.
4. Effectively and efficiently move throughout the mandibular arch using direct and reflected vision. The achievement of this goal may be more challenging for some participants, but will come with time and experience.
5. Comfortably perform endodontic access preparations in all six sextants of the mouth at 2.1x to 12.8x magnification.
7. Master the ergonomics of working under magnification.
8. Preform endodontic access cavity preparation under magnification.
9. Utilize ultrasonics to refine access cavity preparation, remove canal obstructions.
10. Instrument and obturate single rooted and multrooted tooth under magnification.
11. Perform endodontic retreatment under magnification.

Please bring at least 2 teeth with no prep.
