It is now estimated that over half of the North American population suffers from some degree of periodontal disease. In fact, this number is considered a gross underestimation of the true prevalence as it represents patients who actually see dentists for care. Such staggering numbers point to the importance of the dental team's role in one's oral and overall health. Now more than ever it is the responsibility of not only the dentist but also hygienists and auxiliary staff to properly identify and establish accurate diagnosis of the various periodontal conditions that exist in our practices to ensure supervised neglect is not occurring.

Recently, a new classification system has been implemented across the dental field which has changed the foundation by which we diagnose our patients in an effort to improve communication within the dental team and elevate patient care/outcomes. With periodontal disease control and maintenance programs being considered the cornerstone of successful dental practice, it is a must that any provider involved in patient interaction be up to date on these pertinent changes.

This comprehensive lecture will review the important updates of the new classification system and distill the information into a user-friendly fashion to aid in creation of a diagnosis and coincident treatment algorithms.

EDUCATIONAL OBJECTIVES

- Recognize the need for a new classification system for periodontal and peri-implant disease
- Understand the key differences between the old and new classifications
- Explain the classification system for periodontal and peri-implant disease and related conditions
- Identify and classify periodontal disease by utilizing the new staging and grading system
- Master the overlying rules which result in quick and accurate diagnosis creation
- Review case examples to aid in diagnosis formulation
- Apply the new periodontal and peri-implant disease classification system to clinical practice to improve patient care

CLINICIAN

PHIL WALTON, DDS, MMSc, FRCD(C), Diploma Periodontics, earned his Doctor of Dental Surgery degree from the University of Toronto. Prior to pursuit of his graduate dental studies, he completed externships at the University of Michigan and overseas at King's College School of Medicine and Dentistry in London, England.

Dr. Walton completed his Master's degree in Periodontology at the Harvard School of Dental Medicine. His practice includes conventional periodontal therapy for tooth maintenance, periodontal plastics as well as advanced regenerative techniques and implant rehabilitation. His current area of focus lies in immediate implant placement and temporization for both single, multiple and full arch reconstruction.

Dr. Walton is a Fellow of the Royal College of Canada and a US Board Certified Diplomate of Periodontics and Implantology. He maintains an affiliation to University of Toronto, and Harvard as a clinical instructor, international research fellow, admissions committee member and active alumnus.

CANCELLATION POLICY

Cancellations received up to 72 hours prior to the course will receive a 50% refund. No refunds will be given for cancellations received within 72 hours of the course.
